

Florisil

Product Information

Product Overview

Florisil is a hard powdered magnesia-silica gel. It is often referred to as "activated magnesium silicate" or "magnesia-silica gel".

Synonyms

Activated magnesium silicate; magnesia-silica gel

Composition

SiO₂ (84.0 ±0.5%)

MgO (15.5 ±0.5%)

Na₂SO₄ (≤1.0%)

Pore Size

60 Å

Grades

Standard – activated at 650°C

Residue analysis (PR grade) – activated at 675°C

Average particle size

Finer than mesh 200
