

## Blood RNA Extraction Kit

### Product Information

---

**Alias**

RNA; Blood RNA; Extraction Kit

---

**productkeywords**

RNA; Blood RNA; Extraction Kit; Blood RNA Extraction Kit; KIT-019

---

**Product Overview**

The Blood RNA Extraction Kit uses a new magnetic bead technology to quickly and efficiently extract high-quality RNA from anticoagulant treated fresh whole blood samples. This product uses superparamagnetic microspheres, in a special buffer system, can specifically adsorb nucleic acids, separate and purify to obtain high quality RNA.

---

**Storage**

Storage at 2-8°C, do not freeze.

---

**Product features**

Full automation: One step nucleic acid extraction, can be fully automated operation.

Simplicity: No red blood cell cracking step required, no heating operation.

Wide applicability: Suitable for different anticoagulant treatment of blood samples.

High safety: no irritating odor reagents, no phenol chloroform and other organic solvents.
